

Project Summary

DRAINAGE WORKS

South Australia

Services provided include Surveying

Description: Infrastructure

Client: Department of Water, Land & Biodiversity

Timeframe: 2002 & ongoing

Fyfe was contracted to complete the field survey & required plans for drainage works

Drainage Reserve and easement surveys were required for the northern and central catchment drainage works. Fyfe was contracted by the Department of Water, Land and Biodiversity Conservation to complete the field survey and required plans to enable the drains to be transferred in some cases and to hold easements in others. Field surveys are completed using RTK GPS.

Property definition and procedures involved freehold land, crown land and resolving a number of difficult ownership definition issues. A thorough understanding of Development, Real Property and Crown Lands Acts enabled Fyfe Surveyors to determine the required processes. Considerable consultation by Fyfe with the Crown Solicitors Office and Land Titles office was required to ensure the projects had a smooth passage through the system.
